Homework 4:

1. Consider the following results for two independent random samples taken from two populations with equal variance.

| | Sample 1 | Sample 2 |
|-----------------|--------------------|-------------------------|
| Sample Size | $n_1 = 13$ | $n_2 = 15$ |
| Sample Mean | $\bar{x}_1 = 13.6$ | $\overline{x}_2 = 11.6$ |
| Sample Standard | $s_1 = 2.2$ | $s_2 = 3$ |
| Deviation | | |

(a) Find the t-statistic and p-value for the following hypothesis test

$$H_0: \mu_1 \ge \mu_2 + 1 \ vs. H_1: \mu_1 < \mu_2 + 1.$$

(b) Test the following hypothesis test

$$H_0$$
: $\mu_1 = \mu_2 + 3 \ vs. H_1$: $\mu_1 \neq \mu_2 + 3$

by the confidence interval method with $\alpha = 0.05$.

(c) Find the t-statistic and p-value for the following hypothesis test

$$H_0: \mu_1 \leq 13 \ vs. H_1: \mu_1 > 13.$$

(d) Test the following hypothesis test

$$H_0$$
: $\mu_2 = 10 \ vs. H_1$: $\mu_2 \neq 10$

by the confidence interval method with $\alpha = 0.01$.

2. 5 observations were selected from each of 3 populations with equal variance.

| | Sample 1 | Sample 2 | Sample 3 |
|-------------|----------|----------|----------|
| Sample mean | 30 | 45 | 36 |
| Sample | 6 | 4 | 6.5 |
| variance | | | |

- (a) Compute the between-treatments and within-treatments estimates of the population variance.
- (b) Find the F statistic and test H_0 : $\mu_1 = \mu_2 = \mu_3$ at $\alpha = 0.01$.
- 3. Suppose we have the following data:

| 1.86 | 0.51 | -1.14 | 0.33 | 0.17 | 0.67 | -1.69 | 1.02 | 3.32 | -0.20 |
|-------|------|-------|-------|------|------|-------|-------|-------|-------|
| -0.27 | 1.00 | 0.39 | -1.80 | 0.68 | 0.40 | -2.50 | -0.62 | -0.49 | 1.85 |

Please write a program to do the following:

- (a) qq t plot with 10 degrees of freedom.
- (b) qq normal plot with $\mu = 0$, $\sigma^2 = 1.3$.

Put the above 2 plots in the same Figure.

4. Please generate 1000 data from a normal distribution with $\mu=2$,

 $\sigma^2 = 4$. Please write a program to do the following:

- (a) qq-t plot for the generated data with 15 degrees of freedom.
- (b) qq-t plot for the generated data with 2 degrees of freedom.
- (c) qq normal plot for the generated data with $\mu = 3$, $\sigma^2 = 1$.

Put the above 3 plots in the same Figure.

5. (a) The following data have been collected for a sample from a normal population

| 80 | 110 | 100 | 140 | 120 |
|----|-----|-----|-----|-----|
| | | | | |

Find the 99% confidence interval for population mean μ and the t-statistic for H_0 : $\mu = 110 \ vs. H_1$: $\mu \neq 110$.

(b) Consider the following data for two random samples (independent samples) taken from two normal populations with equal variances.

| Sample | 8 | 10 | 5 | 5 | 5 | 9 |
|--------|---|----|---|---|---|---|
| 1 | | | | | | |
| Sample | 6 | 6 | 4 | 5 | 2 | 7 |
| 2 | | | | | | |

Find the t-statistic and its p-value for.

$$H_0: \mu_1 \ge \mu_2 + 3 \ vs. H_1: \mu_1 < \mu_2 + 3$$

where μ_1 and μ_2 are the means of population 1 and population 2, respectively.

6. The data were selected from each of three normal populations with equal variances. The data obtained follow.

| Observation | Sample 1 | Sample 2 | Sample 3 |
|-----------------|----------|----------|----------|
| 1 | 32 | 44 | 33 |
| 2 | 30 | 43 | 36 |
| 3 | 30 | 44 | 35 |
| 4 | 26 | 46 | 40 |
| 5 | 32 | 48 | |
| Sample mean | 30 | 45 | 36 |
| Sample variance | 6 | 4 | 8.67 |

At $\alpha=0.01$, find the F statistic and test the null hypothesis that 3 population means are equal?

7. The following are the number of wrong answers for the number of the students.

| Number | 0 | 1 | 2 | 3 | 4 |
|----------|---|---|---|---|---|
| of | | | | | |
| wrong | | | | | |
| answers | | | | | |
| Number | 3 | 8 | 9 | 9 | 3 |
| of the | | | | | |
| students | | | | | |

Suppose X is the random variable representing the number of wrong answers. Please test X is distributed as Binomial(4,0.45) with $\alpha=0.05$.

- 8. Please generate 1000 data from a t distribution with the degree of freedom equal to 10 first. Then,
 - (a) test if the data is distributed as the standard normal distribution with $\alpha = 0.05$.
 - (b) test if the data is distributed as the t distribution with the degree of freedom equal to 10 at $\alpha=0.05$.
