1. $(50 \%)$
(a) (40\%) Consider a sample with data values of

| 7 | 5 | 5 | 9 | 4 |
| :--- | :--- | :--- | :--- | :--- |

Compute the following.
(i) The variance and the coefficient of variation.
(ii) The $30^{\text {th }}$ percentile and $65^{\text {th }}$ percentile.
(iii) The box plot.
(iv) Can the empirical rule be applied to this data? Explain.
(b) (10\%) Suppose the data have a bell-shaped distribution with a mean of 7 and a standard deviation of 2.
(i) At least what percentage of data will have a value falling [1,13]?
(ii) Determine the range within which contains approximately $68 \%$ of data.
2. (20\%) Suppose we have the following data:

| 30 | 78 | 59 | 65 | 40 | 64 | 52 | 53 | 57 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 39 | 61 | 47 | 50 | 60 | 48 | 50 | 58 | 67 |

Suppose the number of non-overlapping classes is determined to be 4.
(a) Construct a frequency distribution and cumulative percent frequency distribution.
(b) Based on the result of (a), compute the grouped mean.
3. (30\%)
(a) (10\%) The following data are for 20 observations on two qualitative variables: Majors (A: Accounting; B: Statistics; C: Management) and whether taking some test (Y: taking the test; N : not taking the test).

| Observation | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Majors | C | B | C | A | B | A | B | C | C | C |
| Taking Test | Y | Y | Y | N | Y | N | Y | N | Y | Y |
| Observation | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | $\mathbf{2 0}$ |
| Majors | C | B | C | A | B | C | C | A | B | B |
| Taking Test | N | Y | Y | Y | Y | N | Y | N | Y | Y |

Develop a cross-tabulation for the data.
(b) (20\%) For the following two samples of data, $\left(x_{i}, y_{i}\right), i=1, \cdots 5$,

| Sample 1: <br> $x_{i}$ | 1 | 0 | -1 | -2 | -3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sample 2: <br> $y_{i}$ | 1 | 1 | 2 | 2 | 4 |

(i) Give the scatter diagram. (5\%)
(ii) Compute and interpret the sample correlation coefficient. (15\%)
4. (25\%) You are given the following information on Events $A, B$, and $C$.

$$
\begin{gathered}
P(A)=0.4, P(A \cap B)=0.16, P(B)=0.4 \\
P(A \mid C)=0.2, P(C)=0.65
\end{gathered}
$$

(a) Compute $P\left(A \cup B^{c}\right)$.
(b) Compute $P(A \cap C)$.
(c) Compute $P\left(B^{c} \mid A\right)$.
(d) Are $A$ and $B$ independent? Explain your answer.
(e) Are $B$ and $C$ mutually exclusive? Explain your answer.
5. (10\%) You travel from country A to country B, then country B to country C. The probabilities that your luggage is lost at different countries are $20 \%$ at country A and 25\% at country B. Given that your luggage is lost as reaching country C, which country or countries it was most likely lost at? (Hint: Using conditional probabilities).

## Equations:

$$
\begin{gathered}
s_{X Z}=\frac{\sum_{i=1}^{n}\left(x_{i}-\bar{x}\right)\left(z_{i}-\bar{z}\right)}{n-1}, r_{X Z}=\frac{s_{X Z}}{s_{X} s_{Z}} \\
\bar{x}_{g}=\frac{\sum_{k=1}^{m} f_{k} M_{k}}{n}, s_{g}^{2}=\frac{\sum_{k=1}^{m} f_{k}\left(M_{k}-\bar{x}_{g}\right)^{2}}{n-1}
\end{gathered}
$$
