## Quiz 1

1. (30\%)
(a) (20\%) A population proportion is 0.5 . A simple random sample of size 2500 will be taken for (i), and the sample proportion $\bar{P}$ will be used to estimate the population proportion $p$.
(i) What is the probability that the sample proportion will be within $\pm 0.01$ of the population proportion, i.e. $\boldsymbol{P}(|\overline{\boldsymbol{P}}-\boldsymbol{p}| \leq 0.01)$ ?
(ii) Suppose the probability that a sample proportion will be within $\pm 0.005$ of the population proportion is 0.95 , i.e., $P(|\bar{P}-\boldsymbol{p}| \leq 0.005)=0.95$. What is the sample size $n$ ?
(b) (10\%) Suppose we have a population of 72 elements, $y_{1}, y_{2}, \cdots, y_{72}$,

| 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 21 | 23 | 5 | 7 | 29 | 2 | 24 | 6 | 38 |
| 3 | 6 | 27 | 28 | 29 | 0 | 2 | 31 | 8 |
| 42 | 34 | 6 | 8 | 9 | 1 | 3 | 5 | 47 |
| 32 | 50 | 40 | 24 | 33 | 44 | 45 | 48 | 44 |
| 47 | 31 | 36 | 39 | 46 | 45 | 39 | 38 | 45 |
| 27 | 43 | 54 | 36 | 34 | 48 | 23 | 36 | 42 |
| 34 | 39 | 34 | 35 | 42 | 53 | 28 | 49 | 39 |

Suppose the first row of the table of random number is
13154717445998658683511029310880714151416327179945
(i) Please use systematic sampling to obtain a sample of 3 elements.
(ii) Consider the population as $\mathbf{3}$ stratums (in order), i..e,

Stratum 1: $y_{1}, \cdots, y_{24} ;$ Stratum 2: $y_{25}, \cdots, y_{48} ;$ Stratum 3: $y_{49}, \cdots, y_{72}$ Please use stratified random sampling to obtain a sample of 5 data, 1 data from stratum 1, 1 data from stratum 2, 3 data from stratum
2. (30\%) A sample size of 1600 provides a sample mean of 51 and sample standard deviation of 20.
(a) Develop a 95\% confidence interval for the population mean.
(b) Develop a 70\% confidence interval for the population mean.
(c) If another sample with sample size $\mathbf{n} \geq \mathbf{3 0}$ and sample deviation $\mathbf{3 0}$
provides a $95 \%$ confidence interval of which length is the half $(1 / 2)$ of the length of the confidence interval given in (a), find $\mathbf{n}$.
3. (20\%) The following data have been collected for a sample from a normal population

| 2 | 4 | 6 | 4 |
| :--- | :--- | :--- | :--- |

(a) Find the $\mathbf{9 0} \%$ confidence interval for the population mean.
(b) With a $95 \%$ confidence interval , what size sample would be required to estimate the population mean with the margin error equal to $\mathbf{0 . 2 5}$ ?
4. (20\%) A sample of $\mathbf{9 0 0}$ provided a sample proportion of $\overline{\boldsymbol{p}}=\mathbf{0}$. 1 .
(a) Find the $95 \%$ confidence interval for the population proportion.
(b) With a 90\% confidence level, what sample size would be required to estimate the population proportion with a confidence interval with the length equal to 0.02?
5. (20\%)
(a) Let $X$ be normal random variable with mean $\mu$ and variance 1. For the following hypothesis test $H_{0}: \mu=3$ vs $H_{a}: \mu>3$, i.e., $H_{0}: X \sim N(3,1)$ vs $H_{a}: X \sim N(\mu, 1), \mu>3$, we reject $H_{0}$ as $X>4$. Please calculate $\alpha$ and find the range of $\beta$.
(b) Suppose that the sample size $n \geq 30$ and the population variance $\sigma^{2}$ is known. Please derive the $100(1-\alpha) \%$ confidence interval with the form ( $-\infty, c]$ for the population mean, where $c$ is the quantity to be determined. (Hint: using sampling distribution of the sample mean $\bar{X}$ )
